Professional Summary

Senior Product Engineer / Full Stack MERN Developer with **4+ years** of experience designing and shipping end-to-end SaaS products, real-time communication systems, and enterprise-grade dashboards using **MongoDB, Express.js, React, Node.js, TypeScript, and Next.js**. Experienced in frontend architecture, backend APIs, cloud deployment, and performance optimization, with a proven record of improving system efficiency by **30–60%** and leading production-ready engineering workflows.

Skills

Frontend: React, Next.js, TypeScript, JavaScript, Redux, Redux Toolkit, Redux-Saga, Redux Thunk, Kendo React, Material UI, Bootstrap, Tailwind CSS, SCSS, Framer Motion, GSAP, lucide-react, Jest, @testing-library/react

Backend: Node.js, Express.js, FastAPI, REST APIs, WebSockets, Socket.IO, Redis, Worker Threads, Cluster

Database: MongoDB, PostgreSQL, Firebase

Cloud & DevOps: DigitalOcean, Cloudflare S3, PM2, Nginx, Jenkins, GitHub, GitLab, CI/CD

3D & Creative: Three.js, React Three Fiber, Drei, Blender

Specialties: Agile, Scrum, SDLC, Cross-functional Teams, Code Review, Scalable UI Architecture, Real-Time Systems, Performance Engineering, SEO

Professional Experience

Senior Full Stack Engineer

BizMagnets | Product Company

Feb 2024 – Present

BizMagnets Core SaaS Platform

- Owned architecture and development of the core SaaS platform using **React, TypeScript, Vite, and Redux Thunk**, powering **100+ business clients** and **8K+ end-user interactions monthly**, supporting high-volume customer engagement workflows at scale.
- Defined scalable frontend architecture patterns, reusable component library, and Redux-based state management conventions adopted across multiple product modules.
- Directed design and implementation of shared inbox, campaigns, lead capture, and ticketing modules, improving customer response efficiency by **45%**.
- Built and owned drag-and-drop no-code chatbot workflow builder from scratch, reducing manual bot configuration time by **60%**.
- Engineered real-time chat APIs and notification systems using **Socket.IO** with **Redis** pub/sub and Node.js **Cluster** mode, reliably supporting **2,000+ live connections daily** across worker processes.
- Spearheaded frontend performance initiatives including code splitting, bundle optimization, and state management improvements, cutting component re-render latency by **35%** and boosting Core Web Vitals scores.
- Established frontend testing standards using **Jest** and **@testing-library/react**, implementing unit and component test coverage for critical workflows such as chat, ticketing, and campaign modules.
- Mentored and guided 2 junior frontend engineers through daily code reviews, knowledge-sharing sessions, and PR approvals.

ChatsOps Health (Healthcare Workflow System) – New Product Line

- Joined BizMagnets' founding team for its healthcare vertical, building both the React frontend and **Node.js / Express.js** backend for real-time workflow systems used by 80+ hospitals, covering patient discharge, escalations, and handoffs.
- Designed REST APIs and WebSocket services in **Node.js** for live status updates across discharge and escalation workflows, reducing coordination delays by **30%**.
- Modeled hospital workflow data in **MongoDB** and implemented a microservices-based backend, improving fault isolation over the platform's earlier monolithic structure.
- Improved backend throughput with **Redis** caching and Node.js **Worker Threads**; delivered **70%** of production frontend modules and managed CI/CD via **GitLab, Jenkins, DigitalOcean, and Nginx**.

Frontend Developer

Ideassion Technology Solutions

Dec 2021 – Jul 2023

Nippon Paints – Enterprise E-commerce Platform

Dec 2021 – Dec 2022

- Managed development of complete checkout, cart, payment, and order management flows for Nippon Paints' high-traffic enterprise e-commerce platform using **React, Redux, Kendo React, JavaScript, and SCSS**.
- Streamlined checkout journey with tab navigation and Redux state management, contributing to an estimated **20%** increase in transaction completion rate.
- Integrated **Razorpay** payment gateway with seamless transaction flows, robust error handling, and polished UI components.

Buckman Chemical Solutions | Ackumen™ Cooling Management System

Jan 2023 – Jul 2023

- Owned architecture and development of real-time industrial monitoring dashboards for cooling towers and predictive maintenance using **React, Redux-Saga, Material UI, and Bootstrap**, processing thousands of sensor data points daily.
- Enhanced asynchronous data flows with **Redux-Saga**, improving dashboard response time by **40%** for critical operational decisions.

Projects

Direction7 | Founder Project

MERN Stack, Firebase, DigitalOcean, Cloudflare S3, PM2, Nginx

[Live Product](#) | [GitHub](#)

- Designed and deployed a scalable B2B/B2C platform with secure authentication, real-time customization workflows, and production cloud infrastructure.

CarzMoto

Next.js, MERN Stack, Responsive Design

[Live Demo](#)

- Built an SEO-optimized Next.js website and a MERN-based billing system for a Chennai car accessories business, replacing paper-based invoicing with tablet-ready digital billing.

Hissab

MERN Stack, Firebase, PDFKit, WhatsApp API

[GitHub](#)

- Built a billing SaaS for small businesses with PDF invoice generation, GST tax calculations, and one-click WhatsApp invoice sharing.

AI Job Recommendation Platform

React, TypeScript, FastAPI, PostgreSQL, OpenAI / Gemini

[Live Demo](#) | [GitHub](#)

- Built a full-stack AI-powered resume-to-role recommendation engine with explainable matching logic for role relevance.
